

Lee Powder Measure Kit

Fifteen uniformly graduated and proportioned powder dippers. Slide card shows the grains of powder each measure will dispense of every type of powder. Powder measures are inherently safe as they cannot get out of adjustment. That's why powder dippers continue to be the first choice of reloaders who load in small quantities.

90100 **12.98**

Powder Funnel

A large, unbreakable funnel that fits all cases from .22 to .45 caliber. Hole in flange permits mounting to the Lee Turret Press, shelf or bench.

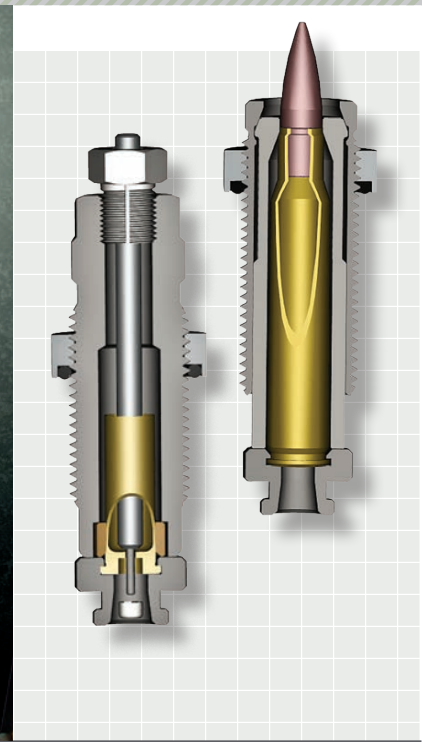

90190 **3.50**

Lee Universal Charging Die

FOR PROGRESSIVE PRESSES ONLY. Automatically charges most cases. The die includes the connecting rod and adaptors to actuate the measure with the case. The measure is positively reset for the next charge when the press ram is fully lowered. Also included are drop tubes for most rifle and pistol cartridges from the 380 ACP to the 300 Win. Magnum. This die does not expand the case neck.

SELECTING THE RIGHT DIE SET FOR YOUR NEEDS

The first step in selecting a die set for a cartridge is to know where and for what purpose the ammo is to be used.

FOR RIFLE

LEE PACESETTER DIES and **RGB SERIES** Use these dies if you want to produce factory-dimensioned ammo that reliably fits and feeds in any gun. They are the first choice for semi-auto actions. **FULL-LENGTH SIZING** is a must if you are reloading for more than one firearm or reloading cases that were fired in others firearms. **PACESETTER 3-DIE SETS** include the **LEE FACTORY CRIMP DIE**.

LEE COLLET NECK SIZING DIES

Use these dies for best accuracy, longest case life and no resizing lubricant. Only the neck of the case is resized. The body is untouched so it retains the perfect fit to your guns chamber. Cases should have been fired in your firearm only and reloaded rounds are intended for use in just one firearm. These dies are the favorite of the bench rest crowd as there is no other die that can produce a more accurate cartridge.

If you intend to reload cases fired in others guns, or you are reloading for more than one gun select the **DELUXE RIFLE DIE SET**. The **DELUXE SET** includes a full length resizing die that allows you to restore any case to factory original dimensions so that you can fire form in your gun and then reload using the superior **COLLET NECK SIZING DIE**.

The **LEE RIFLE FACTORY CRIMP DIE** is the only effective way to crimp bottle neck rifle cartridges. This important step should

be performed on all loads used for hunting. Applying a Factory crimp will always improve the utility of the cartridge and in most cases it will also improve the accuracy.

FOR HANDGUN

All **LEE HANDGUN DIES** feature a **CARBIDE SIZING DIE**. Carbide dies are simply the best way to resize straight walled handgun cartridges.

The **STANDARD THREE DIE SET** works fine when using a quality controlled source of brass like cases fired only in your gun. More care is required when adjusting the bullet seat and crimp die as seating and crimping occur simultaneously.

Select the **DELUXE PISTOL DIE SET** when using mixed range brass or brass that was fired in others guns. The **DELUXE SET** includes the **CARBIDE FACTORY CRIMP DIE**. This die allows you to separate bullet seating from the crimping operation. It makes setup much easier and the die has the added feature of a carbide resizer that does a finishing sizing pass on the completed round. This final sizing guarantees that any case that passes through the die will freely and reliably chamber in any gun.
